MPLA Webmaster Report
01 June 2017

Completed/Ongoing Activities

The transition to webmail only has not been error free. I have kept the mail forwards active until all officers, staff and state reps are able to connect error free.

Possible Long-term problems with web-based email:
- There is not a reliable remember password function.
- Password resets have to be done by webmaster
- unknown issues that might be faced when a new individual assumes the position.

Website is functioning at this time without too many issues. I would like to rebuild the website backend.

Reasons for rebuild
- current install of Modx is not set-up for automatic upgrades
- backend design errors
- implement newer features in modx and related snippets
